

Care Pathways

Musculoskeletal (MSK) Conditions

Is your patient experiencing chronic musculoskeletal pain or disability?

Consider an orthopedic eConsult to optimize management. When submitting a consult request, be sure to include:

Assessment

What specific musculoskeletal issue is the patient experiencing?

What is the location and duration of pain or dysfunction?

Any history of trauma or injury?

What treatments or therapies has the patient already tried?

Does the patient have any limitations in mobility or daily activities?

Diagnostics

Always include:

- X-rays of affected joints or bones
 - MRI or CT scans (for soft tissue injuries or complex musculoskeletal issues)
 - Basic Metabolic Panel
 - Complete Blood Count (CBC)
-

Helpful to include:

- Joint aspiration and analysis
- Rheumatoid factor and anti-CCP
- DEXA Scan
- Ultrasound
- Arthroscopy

Aaron Morgenstein, MD

Orthopedist

Dr. Morgenstein is a board-certified orthopedic surgeon with extensive experience in the hospital and healthcare industry. He earned his medical degree from the University of Kentucky and completed his residency at Atlanta Medical Center.

With a strong background in clinical research, medical education, and healthcare technology, Dr. Morgenstein is dedicated to advancing patient care and innovation in orthopedics.
