

eConsults for Diabetes Management.

Is your patient's last HgbA1c >9?

Consider an eConsult with an endocrinologist to optimize diabetes control. When submitting a consult request, be sure to include:

1 Assessment

What is the patient's current diabetes regimen?

What type of diabetes mellitus does the member have?

- Type I
 - Type II
 - Unknown
-

What medications have been tried previously?

What other comorbidities or complications does the patient have?

2 Diagnostics

Always include:

- Hemoglobin A1c (HgbA1c) or fasting glucose
 - Most recent blood glucose trends if available
 - Basic Metabolic Panel (BMP)
-

Helpful to include:

- Lipid Panel
- Liver Function Tests

Sravanthi Madala, MD, PhD.

Endocrinologist and Endocrinology eConsult Specialist

Dr. Madala is Board Certified in Internal Medicine and fellowship-trained in endocrinology. She attended medical school at the Medical College of Virginia followed by residency at the University of Connecticut Medical Center.
